

EVALUATION BRIEF

Assure Evaluation Brief

Assure is an application security evidence and review platform. Test whether it helps the team answer: does this application finding hold up to review?

1**STAGE**

Scope

EVALUATION WORK

One approved repository snapshot, release owner and five representative findings.

2**STAGE**

Baseline

EVALUATION WORK

Record current reproduction, adjudication, correction and engineering handoff time.

3**STAGE**

Challenge

EVALUATION WORK

Include known, uncertain, changed, dependency and cryptography cases plus unsupported analysis.

4**STAGE**

Decide

EVALUATION WORK

Choose expand, narrow, pause or stop from source reproduction, coverage, effort and rescan quality.

The pass condition

An independent reviewer can reproduce the Assure result, explain the evidence and limits, and identify the next accountable owner. Unsupported conclusions stay unresolved; simulations and proposals are not reported as production outcomes.

The scorecard

Agree baseline, target, observed result, reviewer, correction rate, coverage gaps, setup and review effort, handoff quality, integration work and the evidence that would change the recommendation.

The closeout decision

Retain the case set, accepted inputs, evidence references, corrections, owner actions and operating effort. Record expand, narrow, pause or stop, who decided, why, and the prerequisite for any next phase.

DECISION AFTER THE EVALUATION

The customer can decide whether Assure earns a broader role using evidence from its own representative work.
