

EVALUATION BRIEF

Secure Evaluation Brief

Secure is an infrastructure security evidence platform. Test whether it helps the team answer: which exposure should we investigate first?

1**STAGE**

Scope

EVALUATION WORK

One approved site, service or segment; named owner; collection boundary; current inventory question.

2**STAGE**

Baseline

EVALUATION WORK

Record current discovery, validation and handoff time using the same scope and evidence window.

3**STAGE**

Challenge

EVALUATION WORK

Include known, repeated, unknown, outlier and collection-gap cases. Reconcile source and coverage.

4**STAGE**

Decide

EVALUATION WORK

Choose expand, narrow, pause or stop from traceability, effort, gaps, integration work and ownership.

The pass condition

An independent reviewer can reproduce the Secure result, explain the evidence and limits, and identify the next accountable owner. Unsupported conclusions stay unresolved; simulations and proposals are not reported as production outcomes.

The scorecard

Agree baseline, target, observed result, reviewer, correction rate, coverage gaps, setup and review effort, handoff quality, integration work and the evidence that would change the recommendation.

The closeout decision

Retain the case set, accepted inputs, evidence references, corrections, owner actions and operating effort. Record expand, narrow, pause or stop, who decided, why, and the prerequisite for any next phase.

DECISION AFTER THE EVALUATION

The customer can decide whether Secure earns a broader role using evidence from its own representative work.
